GOLDEN GATE GLORY

Veteran Career Navigator Agent

Week 4 Technical Architecture

Proposed Pre-Build Architecture

IBM SkillsBuild AI Experiential Learning Lab
U.S. 2026 Fall Cohort
AI-Powered Government and Public Service

PRESENTATION TEAM

Jay Warfield

Technical Lead and
Agent Architecture Lead
Technical presenter

William

User, UX, veteran perspective
and responsible AI presenter

Corrine

Narrative and
presentation-flow lead

Confirmed: brief and presenter roles only. Architecture remains proposed.

What the Technical System Must Deliver

Proposed architecture. No implementation or approval implied.

Understand the veteran

01 Receive selected career-transition information

02 Ask adaptive clarification questions

03 Translate military experience into civilian language

Build grounded drafts

01 Connect skill suggestions to supporting evidence

02 Analyze a target job description

03 Generate editable draft career materials

Keep the user in control

01 Identify unsupported claims and gaps

02 Create a prioritized action plan

03 Route uncertain or high-risk outputs to human review

MINIMUM END-TO-END FLOW / PROPOSED

User · Agent · Retrieval · Trust Control · Human Review · Solid = required flow · Dashed = optional / future

Coordinated Agent Responsibilities

Proposed: one user-facing Veteran Career Navigator with coordinated internal capabilities.

Veteran Career Navigator Orchestrator
Coordinates session, workflow state, task routing, output combination and presentation

Intake and Clarification

Collect minimal information.
Ask adaptive follow-up questions.

Skills Evidence and Translation

Map experience to civilian skills.
Retain links to user evidence.

Job Description Intelligence

Compare role requirements with verified experience and gaps.

Career Materials Builder

Create editable resume bullets and career-readiness drafts.

Action Plan Builder

Prioritize gaps, resources, next steps and review actions.

Quality and Responsible AI Reviewer

Check claims, jargon, overstatement, confidence and boundaries.

Capability boundaries are logical. Separate deployed agents are not assumed.

Open Decision, owned by Jay: final number of agents and implementation pattern

Clear Roles Prevent Conflicting Outputs

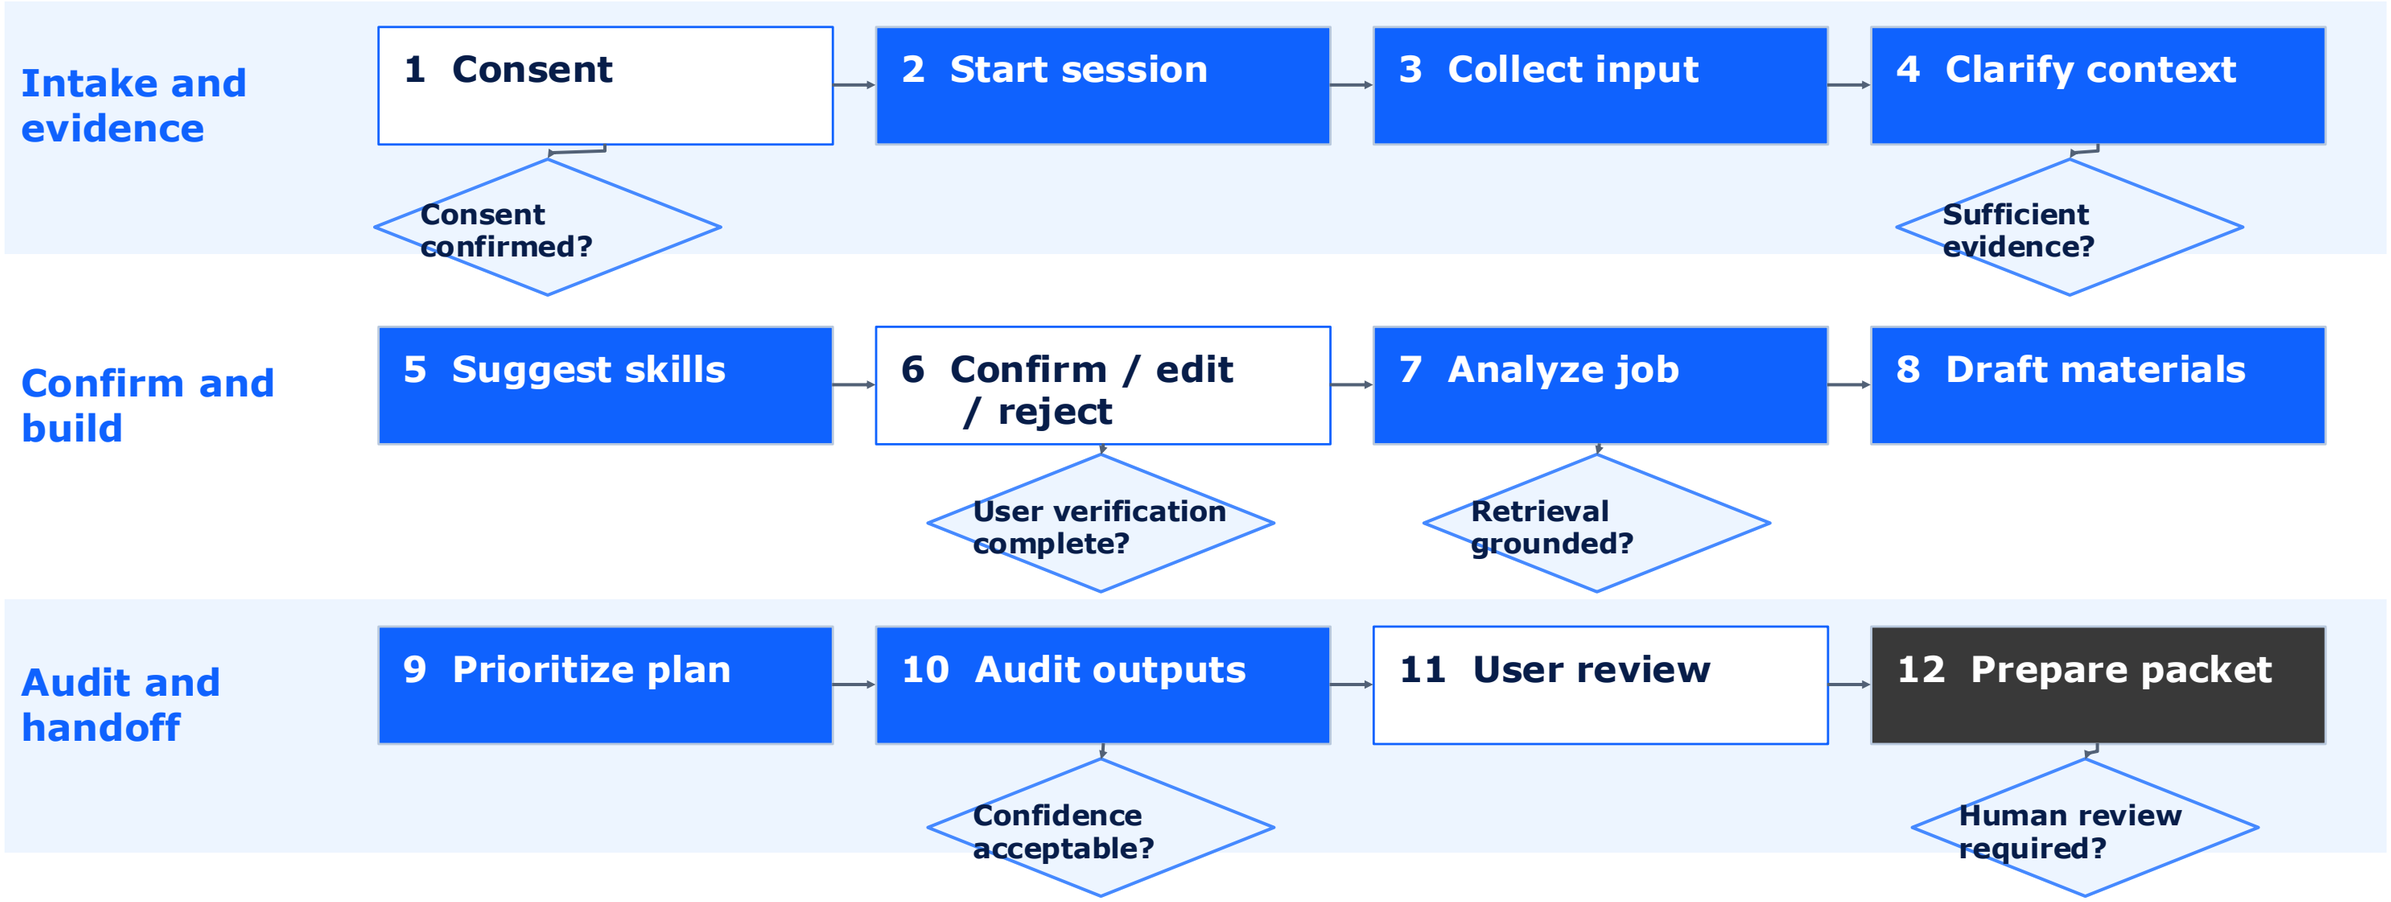

Proposed responsibility contract. Each capability receives only the fields needed for its task.

Agent or Capability	Receives	Decides	Produces	Cannot Do	Escalation Trigger
Orchestrator	Consent, state, capability outputs	Next stage and allowed handoff	Combined result, review packet	Override consent or user rejection	Blocked gate or agent conflict
Intake and Clarification	Selected experience, open questions	Minimum useful follow-up	Clarified input, unresolved gaps	Request protected or classified data	Sensitive input or missing context
Skills Evidence and Translation	Experience and evidence references	Candidate skill and evidence status	Evidence-linked skill suggestions	Invent duties, results or credentials	Unsupported or ambiguous match
Job Description Intelligence	Target description, confirmed experience	Requirement match and evidence gaps	Alignment analysis, missing evidence	Make hiring or eligibility decisions	Conflicting or unclear requirement
Career Materials Builder	Confirmed skills, alignment findings	Draft wording and organization	Editable bullets and career drafts	Add unconfirmed accomplishments	Unsupported claim or overstatement
Action Plan Builder	Gaps, interests, review flags	Priority and next action	Ordered plan and review actions	Guarantee outcomes or official advice	Major decision or resource uncertainty
Quality and Responsible AI Reviewer	Drafts, evidence, source metadata	Release, flag or hold	Findings and review reasons	Silently rewrite confirmed facts	Low confidence or boundary violation

PROPOSED TRUST RULES Least necessary access. Explicit inputs and outputs. No invented accomplishments. User confirmation before downstream reuse. Human escalation for unsupported or high-risk outputs.

Proposed Orchestration Flow

Proposed gated sequence. Advance only when applicable gate conditions pass.

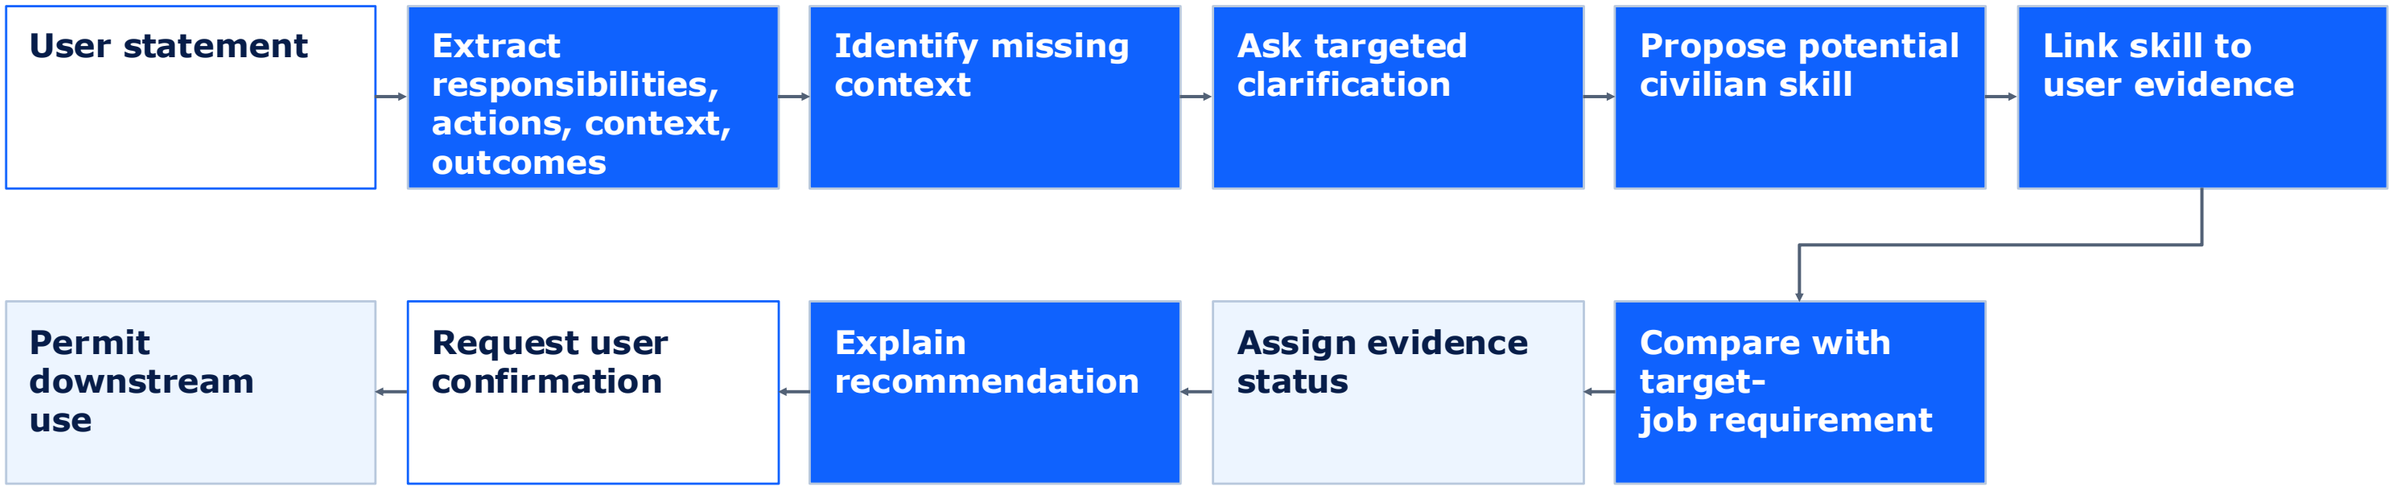

No / unresolved: hold affected work, request correction or route to review. Do not guess.

User | Agent | Retrieval | Trust Control | Human Review | Solid = required flow | Dashed = optional / future

From Experience Description to Defensible Recommendation

Proposed explainable workflow. Show user-facing rationale, not hidden chain-of-thought.

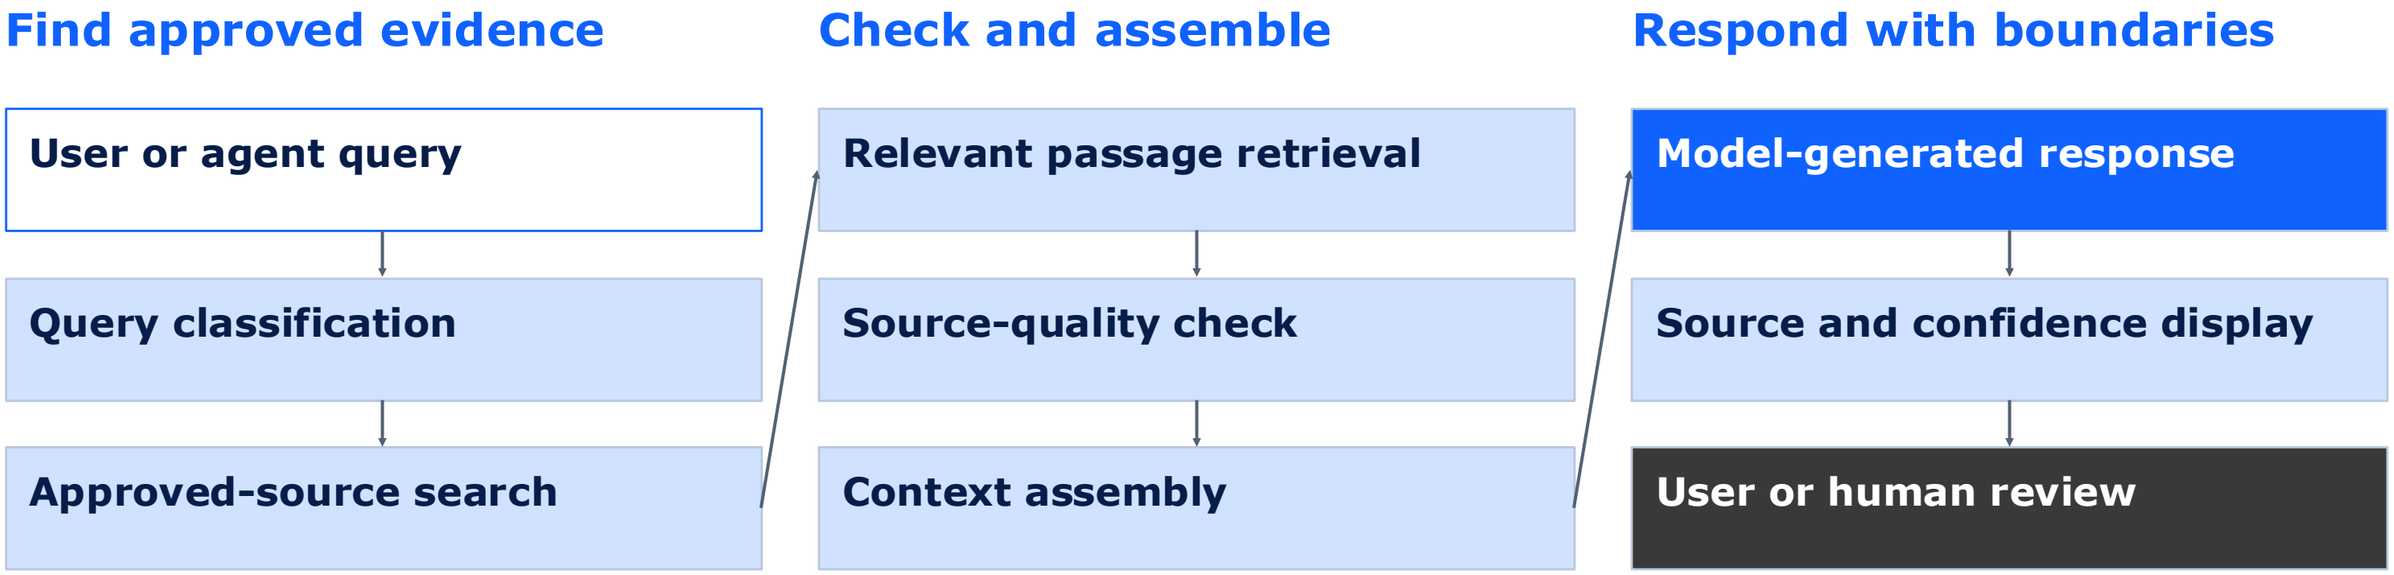

EVIDENCE STATUS / PROPOSED

Supported by User Input	Needs Clarification	Possible Match	Unsupported	Human Review Recommended

A skill label needs an evidence link, an explanation and user confirmation before reuse.

Trusted Retrieval and Grounded Guidance

Proposed RAG design. Specific data sources and IBM implementation choices need confirmation.

REQUIRED CONTROLS / PROPOSED

Approved-source list and source metadata
Relevance threshold and conflict detection
Explicit no-source-found response

No unsupported official guidance
Retrieved facts separate from generated suggestions
Thresholds and confidence method: Open Decision, Jay

Needs Technical and Team Confirmation

What Information Moves Through the System

Proposed data contract. Persistence, deletion behavior and access controls require technical validation.

USER INPUTS

01 Selected experience

02 Responsibilities and accomplishments

03 Training

04 Career interests

05 Target job description

06 Corrections and confirmations

SESSION STATE

01 Completed workflow stage

02 Confirmed skills

03 Rejected suggestions

04 Evidence status

05 Open questions

06 Human-review flags

SYSTEM OUTPUTS

01 Skills summary

02 Job-alignment analysis

03 Draft resume bullets

04 Evidence and skill gaps

05 Prioritized action plan

06 Human-review packet

PROPOSED PRIVACY RULES

Collect only what is needed. Warn against classified or sensitive information.
Do not request protected characteristics. Allow correction and deletion.
Do not assume persistence beyond the approved prototype design.

Graceful Failure Is Part of the Architecture

Proposed failure policy. Stop unsafe downstream actions and preserve verified work where feasible.

Failure	Detection	Automated Response	User Message	Escalation
Missing context	Required field unclear	Hold dependent step, ask	Add detail or skip this item	Unresolved after clarification
Unsupported claim	No evidence reference	Block claim from drafts	Please support or remove it	User or career reviewer
Ambiguous terminology	Multiple plausible meanings	Ask for plain-language context	What did this term mean?	Career reviewer if unresolved
Retrieval timeout or failure	Request error or timeout	Bound retry, then continue without it	Search failed. Retry or skip	Technical owner
No trusted result	No passage meets threshold	Withhold sourced guidance	No trusted result found	Human or official referral
Conflicting sources	Incompatible source claims	Flag conflict, do not choose blindly	Sources disagree. Review needed	Appropriate human reviewer
Low-confidence match	Weak evidence alignment	Mark provisional, prevent reuse	Confirm or reject this match	Career reviewer
Disallowed sensitive content	User warning or content flag	Stop processing affected content	Remove sensitive details	Approved review process
Out-of-scope request	Scope or boundary check	Decline task, suggest referral	This needs an authorized adviser	Official referral
Agent disagreement	Inconsistent capability outputs	Hold result, compare evidence	Recommendations conflict	Quality reviewer, then human
Orchestration failure	Invalid state or failed handoff	Resume from verified stage if safe	Workflow paused. Retry or review	Technical owner
Incomplete final packet	Required section missing	Flag missing pieces, withhold final	Packet is incomplete. Edit or retry	User and technical owner

Explain the failure. Offer retry, edit, skip or human review. Log the unresolved issue for review.

Where Human Judgment Enters the Workflow

Proposed review levels. Career guidance does not replace official decisions or professional advice.

LEVEL 1

User Verification

01 Confirm skills

02 Correct experience

03 Reject recommendations

04 Edit draft materials

LEVEL 2

Career or Workforce Review

01 Validate civilian language

02 Strengthen career materials

03 Review target-role alignment

04 Discuss training or employment next steps

LEVEL 3

Official Referral

01 Benefits and eligibility

02 Legal, medical and financial matters

03 Hiring decisions

04 Official government determinations

HUMAN-REVIEW TRIGGERS Unsupported accomplishment, low confidence, conflicting evidence, major career decision,
official-guidance request, user-requested escalation or a quality-review flag.

Proposed packet: selected drafts, evidence, unresolved questions and review reasons. User approves sharing.

User-approved packet ----------▸ Future Backlog: external reviewer delivery integration

Technology Choices Requiring Technical Validation

Candidate options only. Availability, suitability, integration effort and cohort access remain unconfirmed.

Technology Area	Proposed Need	Options to Evaluate	Decision Owner	Status
Foundation model or inference	Generate bounded drafts	IBM watsonx.ai, IBM Granite models	Jay	Open Decision
Orchestration	Stage routing and gates	Application workflow, IBM watsonx Orchestrate	Jay	Open Decision
RAG or retrieval service	Approved passage retrieval	Local search, available IBM-aligned service	Jay	Open Decision
Knowledge storage	Versioned approved content	Curated files, approved IBM Cloud storage	Jay	Open Decision
Session-state handling	Confirmed evidence and stage	Ephemeral state, approved persistence	Jay	Open Decision
User interface or prototype	Consent, editing, verification	Lightweight form or chat prototype	Jay with William	Open Decision
Logging and audit support	Issue and decision trace	Minimal local log, approved cloud service	Jay	Open Decision
Document ingestion	Selected text extraction	Pasted text, permitted file parser	Jay	Open Decision
Human-review packet generation	Portable review summary	Editable document or structured summary	Jay with William	Open Decision

Jay will determine the smallest feasible IBM-aligned architecture supported by the team account and program constraints.

Ready for Week 5 When the Core Flow Is Buildable

Proposed MVP acceptance criteria. Readiness targets, not achieved or tested results.

Architecture clarity

01 Each capability has a defined responsibility

02 Inputs and outputs are mapped

03 Orchestration decisions are documented

04 Retrieval requirements are defined

05 Failure and escalation paths are visible

MVP readiness

01 One complete end-to-end flow is selected

02 Data sources are available or responsibly simulated

03 User verification is included

04 Unsupported claims are blocked or flagged

05 Human review is represented

06 A fragile but demonstrable Week 5 flow is feasible

KEY DECISION FOR JAY AND THE TEAM

What is the smallest technically credible flow we can build and demonstrate from veteran intake through a verified and useful career-readiness output?

Future Backlog: broader automation and persistent multi-session support, only after a viable core flow.
